

Residential Solar Power Roof Mounted System

Las Vegas NV

Most homes are ideal for a roof-mounted solar power system. This is the most economical option for homeowners because of the speed and ease of installation, even on tile roofs. The two main factors for solar on your roof are the orientation and the square footage. Call your Bombard Renewable Energy consultant to discuss the benefits and return on investment for your home today.

Bombard Renewable Energy has the strength and resources to handle any size project. From the initial planning stages, proposals, costs analysis, installation to completion, customer service and communication are instrumental in managing our customers' expectations.
